## Lesson Plan

## Subject: Applied Mathematics I (FEC101)

## Credits-4

## Syllabus:

| Module <br> No | Topic | Hours <br> Planned |
| :---: | :--- | :--- |
| $\mathbf{0 1}$ | Complex Numbers Pre-requisite: Review of Complex Numbers-Algebra of <br> Complex Number, Cartesian, polar and exponential form of complex number <br> 1.2. Expansion of sinn $\theta$, cosn $\theta$ in terms of sines and cosines of multiples of $\theta$ <br> and <br> Expansion of sinn $\theta$, cosn $\theta$ in powers of sin $\theta$, cos $\theta$ | $\mathbf{2}$ |
| 1.3. Powers and Roots of complex number. | $\mathbf{2}$ |  |
| 02 | Hyperbolic function and Logarithm of Complex Numbers <br> 2.1. Circular functions of complex number and Hyperbolic functions. Inverse <br> Circular and Inverse Hyperbolic functions. Separation of real and imaginary <br> parts of all types of Functions. <br> 2.2 Logarithmic functions, Separation of real and Imaginary parts of <br> Logarithmic Functions. <br> \# Self learning topics: Applications of complex number in Signal processing, <br> Electrical circuits | $\mathbf{2}$ |

Partial Differentiation \\
3.1 Partial Differentiation: Function of several variables, Partial derivatives of first and higher order. Differentiation of composite function. \\
3.2.Euler's Theorem on Homogeneous functions with two independent variables (with proof). Deductions from Euler's Theorem. \\
\# Self learning topics: Total differentials, implicit functions, Euler's Theorem on Homogeneous functions with three independent variables.
\end{tabular} \& 3

3 <br>

\hline 04 \& | Applications of Partial Differentiation and Successive differentiation. |
| :--- |
| 4.1 Maxima and Minima of a function of two independent variables, |
| Lagrange's method of undetermined multipliers with one constraint. |
| 4.2 Successive differentiation: nth derivative of standard functions. Leibnitz's Theorem (without proof) and problems |
| \# Self learning topics: Jacobian's of two and three independent variables (simple problems) | \& 3

3 <br>

| :--- | :---: | :---: |
| .6.2 Solution of system of linear algebraic equations, by (1) Gauss Jacobi <br> Iteration Method, (2) Gauss Seidal Iteration Method. <br> 6.3 Taylor's Theorem (Statement only) and Taylor's series, Maclaurin's <br> series (Statement only).Expansion of $e \quad \sin (x), \cos (x), \tan (x), \sinh (x)$, <br> $\cosh (x)$, <br> $\tanh (x), \log (1+x),(x),(x),(x)$. <br> \# Self learning topics: Indeterminate forms, L- Hospital Rule, Gauss <br> Elimination Method, Gauss Jordan Method. | 2 |

## Course Outcomes:

Upon completion of this course students will be able to:
FEC101.1 Use the concept of rank of matrix to solve the given system of homogeneous and non-homogeneous linear equations.

FEC101.2 Understand the basics of Complex numbers, obtain roots of complex numbers using De Moivre's theorem and also real and imaginary parts of a given complex number.

FEC101.3 Use partial differentiation to obtain the extremum value of the given function of two or three variables

FEC101.4 Find the nth derivative of a given function using Leibnitz's theorem [Successive differen.]

## Mapping of CO and PO/PSO

Relationship of course outcomes with program outcomes: Indicate 1 (low importance), 2 (Moderate Importance) or 3 (High Importance) in respective mapping cell.

## Justification

P01: C0s are mapped to this P01 because the students gain basic knowledge on mathematical concepts required for higher semesters (mathematics and technical application)
