## F.E. (E) (semester II) (2019-2020) <br> Lesson Plan

Subject: Applied Mathematics II (FEC201)
Credits-4
Syllabus:

| Course Code | Course Name | Teaching Scheme (Contact Hours) |  |  |  | Credits Assigned |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Theor | Pract. |  | Tut. | Theory | Tut. | Pract. | Total |
| FEC201 | Engineering Mathematics-II | 3 | -- |  | 1* | 3 | 1 | -- | 4 |
| Course Code | Course Name | Examination Scheme |  |  |  |  |  |  |  |
|  |  | Theo ry |  |  |  |  | Term Work | Pract. /oral | Total |
|  |  | Internal Assessment |  |  | End Sem. Exam. | Exam. <br> Duration (in Hrs) |  |  |  |
|  |  | Test1 | Test 2 | Avg. |  |  |  |  |  |
| FEC201 | Engineering Mathematics-II | 20 | 20 | 20 | 80 | 3 | 25 | -- | 125 |

## Objectives

1. The course is aimed to develop the basic Mathematical skills of engineering students that are imperative for effective understanding of engineering subjects. The topics introduced will serve as basic tools for specialized studies in many fields of engineering and technology.
2. To provide hands on experience in using SCILAB software to handle real lifeproblems

## Outcomes:

Learners will be able to...

1. Solve various types of First Order differential equation.
2. Solve various types of Higher Order Differentialequation.
3. Illustrate the concepts of Beta and Gamma function,DUIS andrectification.
4. Apply the concepts of Doubleintegral
5. Apply the concept of Tripleintegral.
6. Apply the principles of Numerical Method for solving differential equation and numerical integration analytically and using Scilabalso.

| Module | Detailed Contents | Hrs. |
| :---: | :---: | :---: |
| 01 | Differential Equations of First Order and First Degree <br> Exact differential Equations, Equations reducible to exact form by using integratingfactors. Linear differential equations (Review), equation reducible to linear form, Bernoulli‘sequation. <br> \# Self learning topics:Simple application of differential equation of first order and first degree to electrical and Mechanical Engineering problem | 4 2 |
| 02 | Linear Differential Equations With Constant Coefficients and Variable CoefficientsOf Higher Order Linear Differential Equation with constant coefficient- complementary function, particular integrals of differential equation of the type $f(D) y=X$ where $X$ is ()() . <br> Method of variation ofparameters. <br> \# Self learning topics: Cauchy's homogeneous linear differential equation and Legendre's differential equation, Applications of Higher order differential equation. | $4$ $2$ |
| 03 | Beta and Gamma Function, Differentiation under Integral sign and Rectification <br> Pre-requisite: Tracing of curves <br> Beta and Gamma functions and itsproperties. <br> Differentiation under integral sign with constant limits ofintegration. | 2 |
|  | 1.3 Rectification of plane curves.(Cartesian and polar) <br> \# Self learning topics: Rectification of curve in parametric co-ordinates. | $\begin{aligned} & 2 \\ & 2 \end{aligned}$ |
| 04 | Multiple Integration-1 <br> Double integration- definition, Evaluation of Double Integrals.(Cartesian \&Polar) Evaluation of double integrals by changing the order ofintegration. <br> Evaluation of integrals over the given region. (Cartesian \&Polar) <br> \# Self learning topics: Application of double integrals to compute Area, Mass. | $\begin{aligned} & 2 \\ & 2 \\ & 2 \end{aligned}$ |
| 05 | Multiple Integration-2 <br> Evaluation of double integrals by changing to polarcoordinates. <br> Application of double integrals to computeArea <br> Triple integration definition and evaluation (Cartesian, cylindrical and spherical polarcoordinates). <br> \# Self learning topics:Application of triple integral to compute volume. | $\begin{aligned} & 2 \\ & 2 \\ & 2 \end{aligned}$ |
| 06 | Numerical solution of ordinary differential equations of first order and first degree, and, Numerical Integration <br> Numerical solution of ordinary differential equation using (a) Euler‘smethod <br> (b)Modified Euler method, (c) Runge Kuttafourth order method <br> Numerical integration- by (a) Trapezoidal (b) Simpson's $1 / 3 \mathrm{rd}$ (c) Simpson's 3/8th rule(all withproof). <br> \# Selflearningtopics: $\quad$ Numerical solution of ordinary differential equation using <br> Taylorseriesmethod. | 3 3 |

## Term Work

General Instructions:

1. Batch wise tutorials are to be conducted. The number of students per batch should be as per University pattern forpracticals.
2. Students must be encouraged to write SCILAB Programs in tutorial class only. Each Student has to write at least 4 SCILAB tutorials (including print out) and at least 6 class tutorials on entiresyllabus.
3. SCILAB Tutorials will be based on (i) Euler Method, (ii) Modified Euler Method, (iii) RungeKuttaMethodoffourthorder,(iv)TrapezoidalRule,(v)Simpson's1/3rdRule
(vi) Simpson's 3/8thrule

The distribution of marks for term work shall be as follows:

- Class Tutorials on entire syllabus : 10marks
- SCILABTutorials : 10marks
- Attendance (Theory and Tutorial) : 05marks

The final certification and acceptance of TW ensures the satisfactory performance of laboratory work and minimum passing in the TW.

## Assessment

## Internal Assessment Test

Assessment consists of two class tests of 20 marks each. The first class test is to be conducted when approx. $40 \%$ syllabus is completed and second class test when additional $35 \%$ syllabus is completed. Duration of each test shall be one hour.

## End Semester Examination

In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

1. Question paper will comprise of 6 questions, each carrying 20 marks .
2. Question number 1 will be compulsory and based on maximum contents of thesyllabus
3. Remaining questions will be mixed in nature (for example, if $Q .2$ has part (a) from module 3 then part (b) will be from other than module3)
4. Total four questions need to be solved.

## References

1. Higher Engineering Mathematics, Dr. B. S. Grewal, KhannaPublication

Elementary Linear Algebra with Application by Howard Anton and Christ Rorres.6th edition. John Wiley \& Sons,INC.

## Course Outcomes:

Upon completion of this course students will be able to:

1. Solve first order and higher order differential equations.
2. Apply numerical methods to solve Differential Equations
3. Apply Beta-Gamma functions to solve integration problems.
4. Rectify the given curve( using Cartesian, polar and parametric form)
5. Apply the concept of multiple integrals to find area of the given region and mass of given lamina.

## Mapping of CO and PO/PSO

Relationship of course outcomes with program outcomes: Indicate 1 (low importance), 2 (Moderate Importance) or 3 (High Importance) in respective mapping cell.
