## ICT/Bridge Courses for the year 2021-22

8 Courses

Jan 11, 2022

**Nash Michael Dodti**

has successfully completed the online, non-credit Professional Certificate

### Google Data Analytics

Those who earn the Google Data Analytics Professional Certificate have completed eight courses, developed by Google, that include hands-on, practice-based assessments and are designed to prepare them for introductory-level roles in Data Analytics. They are competent in tools and platforms including spreadsheets, SQL, Tableau, and R. They know how to prepare, process, analyze, and share data for thoughtful action.

The online specialization named in this certificate may draw on material from courses taught on-campus, but the included courses are not equivalent to on-campus courses. Participation in this online specialization does not constitute enrollment at this university. This certificate does not confer a University grade, course credit or degree, and it does not verify the identity of the learner.

## Introduction to Python for Machine Learning

ID: 146927115141f000

Grade: **85.0%**

Python has been rated by data science and machine learning professionals as their most preferred programming language. As a first step towards to expert voyage, you will learn about Python programming language, especially how it is used in analysis and data science, including the data science pipeline in this course. This course also explores how machine learning techniques can be an invaluable tool for solving one of the grand challenges posed to humanity - climate change. At the end of this course, you will work on cleaning, wrangling, exploring, providing summary statistics and interesting visualisations on a public utility data containing millions of rows and tens of files in structured format.

## Machine Learning: Regression - Predicting Energy Efficiency of Buildings

ID: 146a489af0c1f000

Grade: **80.0%**

Regression, a statistical method used in finance, investing, and other disciplines, attempts to determine the strength and character of the relationship between one dependent variable and a series of other variables (known as independent variables). In this course, we will develop a multivariate multiple regression model to study the effect of eight input variables on two output variables, which are the heating load and the cooling load, of residential buildings.

## Machine Learning: Classification - Managing the Quality Metric of Global Ecological Footprint

 ID: 146a63a475c1f000

Grade: **60.0%**

The dataset used in this course was obtained from the National Footprint and Biocapacity Accounts. It provides Ecological Footprint per capita data for years 1961-2016 in global hectares (gha). The National Footprint and Biocapacity Accounts (NFAs) measure the ecological resource use and resource capacity of nations from 1961 to 2016. The calculations in the National Footprint and Biocapacity Accounts are primarily based on United Nations data sets. In this course, we will use the data to classify and predict the quality metrics (qascore) of the ecological footprint data for the different countries. This data includes total and per capita national biocapacity, the ecological footprint of consumption, the ecological footprint of production and total area in hectares.
